PROFESSIONAL SUMMARY

Full-Stack Web & Cross-Platform Mobile Engineer with experience architecting, deploying, and maintaining high-performance digital products across web, mobile, and cloud environments. Proficient in TypeScript, React, Next.js, React Native/Expo, Node.js, Python (FastAPI), PostgreSQL, and Supabase, with a proven track record of shipping end-to-end solutions from design to production. Adept at building offline-first mobile applications, secure multi-tenant architectures with Row-Level Security (RLS), payment gateway integrations (Paystack), and resilient API backends. Combines a strong eye for UI/UX aesthetic engineering with defensive backend practices (JWT token rotation, input sanitisation, rate limiting) to deliver scalable, reliable, and user-centric software.

CORE LANGUAGES & FRAMEWORKS

Programming Languages: TypeScript, JavaScript (ES6+), Python, SQL, HTML5, CSS3, Solidity (Foundations)

Frontend Technologies: React.js (v18+), Next.js 14 (App Router & Server Components), Vue.js, Tailwind CSS, Framer Motion, NativeWind, Vite

Mobile Engineering: React Native (0.80+), Expo (SDK 50+), Expo Router, @shopify/flash-list, Biometric Authentication (expo-local-authentication), Hardware APIs (Thermal Receipt Printing, Background NetInfo Sync)

Backend & APIs: Node.js, Express.js, Python (FastAPI, Django), RESTful APIs, Webhooks, Server-Side Event Handling, Microservices

Databases & State Management: PostgreSQL, Supabase (Auth, RPCs, Row-Level Security), MongoDB, Redis, Prisma ORM, SQLite, Zustand, Context API

DevOps, Tooling & Security: Git/GitHub, Docker, JWT (Dual-Token Access/Refresh Rotation), Paystack Payment API, Brevo/Nodemailer, Cloudinary CDN, Schema.org JSON-LD SEO, Render, Vercel

RELEVANT EXPERIENCE

Full-Stack Web & Mobile Developer

PYTHRON | Jul 2025 — Present

- Founded and led development at PYTHRON, directing the technical architecture and execution of web and cross-platform mobile products across diverse domains.
- Engineered an offline-first Point-of-Sale (POS) and inventory management mobile application utilizing React Native, Expo, and Supabase with automatic background sync and 60 FPS list virtualisation.
- Developed a full-stack SaaS and educational platform for teaching “vibe-coding” using Next.js 14, TypeScript, Tailwind CSS, and FastAPI, implementing role-based access control (RBAC), media asset pipelines, and caching layers.
- Experimented with Web3-based processes and digital transactions by creating a chess wager dApp (Decentralised Application) for playing chess over the blockchain with cryptocurrencies at stake.

Full-Stack Developer

The Rural Girl Child Advancement Network (RUGAN) | Mar 2026 — Jun 2026

- Architected and deployed the official production web platform and administrative Content Management System from Figma designs, ensuring 100% mobile responsiveness and sub-1.2s page load speeds.
- Engineered a secure Paystack donation processing pipeline with server-side webhook verification, real-time transaction state reconciliation, and automated receipts.
- Integrated Brevo transactional email APIs to deliver instant automated notifications for volunteer applications, newsletter dispatches, and donation confirmations.
- Configured Cloudinary CDN media workflows enabling non-technical field coordinators to publish and transform high-resolution impact stories with zero layout shift.

Computer Science Teacher

CEDEC International Schools | Sept 2024 — Aug 2025

- Instructed secondary students in foundational computing, data structures, algorithms, databases, and web programming principles.
- Mentored students through hands-on coding projects, fostering algorithmic problem-solving and basic understanding of software.

Graphic Designer & Digital Publisher

Modem Computer Technology | 2018 — 2020

- Designed commercial brand identities, marketing materials, and digital UI layouts using Adobe Photoshop and CorelDRAW.
- Prepared high-precision prepress documents, corporate publications, and technical service catalogues.

EDUCATION/CERTIFICATIONS

Aptech Certified Web Developer, Full Stack Web Development

2025 – 2026

Aptech Learning

B. Sc. (Ed) in Computer and Robotics Education

2020 – 2024

University of Nigeria Nsukka, Enugu State.

Advanced Diploma in Desktop Publishing and Graphic Design

2018 – 2019

Modem Computer Technology, Bogije, Lagos.

PERSONAL PROJECTS

1. VibeSkool (Work in progress)

React, Node.js, Express, PostgreSQL, Vite, Supabase

- Built and deployed a full-stack collaborative learning platform featuring in-browser code execution, live classroom telemetry, and interactive curriculum tracks.
- Architected a RESTful API in Node.js/Express connected to a PostgreSQL database on Supabase, implementing JWT and Google OAuth 2.0 authentication with role-based access control.
- Designed an interactive HTML5 Canvas simulation achieving 60 FPS performance across mobile and desktop devices with touch-gesture collision physics.

- Engineered a cross-platform design system in CSS Modules with dark/light themes, custom typography subsetting (.woff2), and responsive layouts tailored for mobile viewports down to 360px.
- Implemented instructor telemetry tooling allowing real-time monitoring of student test runs, error states, and live code pairing sessions.

2. The Watchtower News — Editorial Publishing Platform (2025)

React 18, Vite, Node.js, Express, PostgreSQL, Prisma ORM, JWT, bcrypt, Helmet, Nodemailer

- Engineered dual-token JWT authentication (HttpOnly refresh token rotation) with salted bcrypt encryption, defensive Helmet HTTP headers, CORS whitelisting, and strict IP rate limiting.
- Modeled relational PostgreSQL schemas using Prisma ORM for efficient article indexing, desk filtering (World, Tech, Business), and user bookmark retrieval.
- Built full-text article search and structured OpenGraph metadata, securing a 100% Lighthouse SEO rating and sub-450ms API responses.

3. Record Am — Mobile Bookkeeping & POS Suite (2026)

React Native 0.81, Expo SDK 54, Expo Router, Supabase (PostgreSQL), Zustand, NativeWind, @shopify/flash-list

- Devised an offline-first transaction queue with Zustand that logs sales, restocks, and debt installments with 0ms UI latency, auto-syncing mutations to Supabase upon network reconnection.
- Implemented multi-tenant PostgreSQL Row-Level Security (RLS) policies paired with biometric lock gates (Fingerprint / Face ID / PIN) via expo-local-authentication.
- Built automated 58mm/80mm PDF thermal receipt generation (expo-print), one-tap WhatsApp payment reminder dispatch, and real-time daily cash drawer P&L reconciliation.

4. grab — Social Media Video Downloader Android App (2026)

Kotlin, Python (Flask), yt-dlp, FFmpeg, Node.js (PO Tokens), Unicorn, Render, Bash Scripting

- Engineered a generator-based disk-to-client streaming pipeline with custom Content-Disposition and Date headers, serving 200MB+ multiplexed DASH MP4 streams without exceeding strict 512MB free-tier cloud RAM limits or corrupting camera roll chronological sorting.
- Built a staggered background Node.js service capped at 64MB RAM with shell JIT compiler warmup synchronization, generating cryptographic Proof of Origin (PO) tokens on the fly to bypass YouTube datacenter IP bans with zero latency.
- Overrode default greedy stream selectors with custom format sorting (vcodec:h264), filtering out fragmented HEVC/AV1 streams to guarantee 100% video playback across older Android devices and WhatsApp sharing.
- Multi-tiered extractor pipeline that queries fast Cobalt API endpoints first, automatically failing over to the modified internal yt-dlp/FFmpeg engine upon Cloudflare blocks or rate limits.

5. The 24 Log — Intentional, Privacy-First Daily Time-Accounting Ledger (2025)

Modern Component-Driven Vanilla JS, HTML5, CSS3, Service Worker (PWA), State Machine, localStorage Engine

- Engineered a zero-dependency, privacy-first progressive web application (PWA) for daily time accounting and productivity tracking using Vanilla ES6+ JavaScript, CSS Grid, and HTML5.
- Architected an offline-first client-side data engine leveraging localStorage and Service Worker Cache APIs, guaranteeing 100% uptime and zero data leakage.
- Developed a dynamic design system featuring tactile 3D physical UI components, accessible dual-theme color contrast engines, and real-time typographic switching.
- Achieved 100/100 Lighthouse performance and accessibility scores by eliminating external runtime libraries, optimizing DOM rendering, and enforcing semantic markup.
